

PAPER SACKS the sustainable and logical solution to waste recycling

EcoSack paper sacks provide the perfect solution for the collection of garden, paper and kitchen waste. Only totally sustainable papers guaranteed to biodegrade are used.

Paper refuse sacks are produced in a range of sizes and strengths covering all the needs of the waste sector. Differing paper specifications are used, tailored to meet the specific requirement.

Paper sacks are the truly natural choice for the collection of paper and all organic materials. Paper sacks have characteristics no other material can match and are the logical choice for waste management.

Additionally the paper sacks have been recognised by three different international certificating bodies: the German Din Certco mark, as supported by The Composting Association for the UK, the Belgian OK Compost certificate and a similar Dutch award, the Kiwa Milieukeur.

A natural solution

- 🔄 Paper is from a renewable resource – trees
- 🔄 Only softwoods are used – not hardwood from rain forests
- 🔄 Both paper and sacks are environmentally certified
- 🔄 All paper used is from cultivated forests which absorb carbon dioxide and give off oxygen - this is **not** achieved in the manufacture of any alternative sack
- 🔄 Paper from approved FSC resources
- 🔄 The paper we use is made from tree flakes from parts of the tree that would otherwise be wasted and from process waste from the timber industry
- 🔄 Paper presents a sound environmental case which any form of “plastic” fails to do
- 🔄 Printing on the sacks can be clear, informative and promotional

EcoSack is a part of Segezha Packaging, which has operations throughout Europe, producing more than 1,500 million paper sacks a year.
